[Workshop "Second life of batteries : technical challenges and quality assessment" Monday 11 march 2019](#)

Although battery re-use in stationary applications offer obvious environmental and economic opportunities, whether end-of-life EV batteries should be recycled or re-used is still hotly debated. The workshop offers discussions on how to extend battery's lifetime economically. Three topics are covered:

- battery quality estimation,
- battery quality standards,
- second life batteries experiences.

It is held the day before the ESE/IRES expo.

Founded in 1983, [the International Battery Seminar & Exhibit](#) has established itself as the premier event showcasing the state of the art of worldwide energy storage technology developments for consumer, automotive, military, and industrial applications. Key thought leaders will assemble to not only provide broad perspectives, but also informed insights into significant advances in materials, product development, manufacturing, and application for all battery systems and enabling technologies. As the longest-running annual battery industry event in the world, this meeting has always been the preferred venue to announce significant developments, new products, and showcase the most advanced battery technology. For example, Sony chose the International Battery Seminar as the platform to first announce its lithium-ion technology in 1991, an accomplishment that has since gone on to change the world. Attendance has more than doubled since joining Cambridge EnerTech in 2015!
